

AeroStruct

C O N S U L T I N G

AeroStruct Consulting CC was established in 2006 as an engineering consultancy for the general aviation industry. We are a SACAA-approved Design Organisation (DO672) based at Wonderboom Airport near Pretoria.

We are organised to provide aeronautical product design, development, testing and certification services to a wide range of customers in the aviation industry.

Our services include:

- Aeronautical design: Aerodynamic, structural and system design from concept to detailed design. Minor modification and repair scheme designs and approvals.
- Product development: Prototype manufacture and improvements throughout the development phase.
- Product evaluation: Testing including functional tests, static and dynamic loading tests and flight tests for purposes of design approval and certification.
- Certification: Type certification and supplemental type certification for new products, parts and appliances, and design changes to existing products. Organisational approvals in terms of the SA Civil Aviation Regulations.

The engineering team at AeroStruct have over 40 years' experience in design of composite products and parts for the aviation industry, including five complete aircraft of which four were series manufactured and one was the first type certified aircraft in South Africa.

We are available and eager to offer our services to your enterprise.
