

Tecusat (Pty) Ltd

TecuSat (Pty) Ltd is a new participant in the Southern African aviation industry, focused on the manufacturing and marketing of **Non-Type Certificated Aircraft (NTCA)**.

Our cornerstone project is the **Silver Lakes Aerodrome** initiative-combining the establishment of a multi-purpose manufacturing facility with the associated training, testing and storage services and facilities. Our emphasis being on job creation through a comprehensive Enterprise and Supplier development programme.

The Silver Lakes Aerodrome is strategically placed to serve the diverse needs of businessmen and aviation enthusiasts from its future headquarters in the Centurion Aviation Village (CAV) -a unique hub designed to synergise the gross-over opportunities from blending civilian and defense operations and structures.

The Aerodrome takes its name from the Silver Lakes region in the greater Pretoria Metropolitan area, where the originally registered airfield will be developed and expanded to compliment the CAV facilities. These include flight schools and certified training centre and a range of services - from aircraft testing, hanging services and hospitality.

TecuSat will initially focus on the manufacturing of six (6) NTCA's covering a range of operations and interests - from bush operations to sport, leisure, and tourism - providing aviation enthusiasts with a complete experience that ensures clients' needs are comprehensively catered for. Our focus on quality, maintenance and sound management is aimed to achieving the objectives of the Southern African Aviation Industry and champions, i.e. the Department of Trade and Industry (the dti/CAV) and Tshwane Economic Development Agency (TEDA). This focus will ensure the growth of the aviation industry and the positioning of South Africa as a competitive industry stakeholder.

Please contact us. We would love to work with you.
